

ISO 9001:2015 Challenges and Opportunities for Auditors

Control, Automation, Logistic and Risk Management

Date • 24 May 2018, Thursday

Venue • Regal Riverside Hotel, Shatin (Hong Kong)

Time • 9:00 a.m. (registration) – 5:00 p.m.

ISO 9001:2015 Challenges and Opportunities for Auditors Control, Automation, Logistic and Risk Management

Programme Rundown

Time	Topic	Speaker
09:00 - 09:15	Registration	
09:15 - 09:30	Opening Speech	Ir Dr Tommy Lo President of Hong Kong Institution of Certified Auditors (Hong Kong)
09:30 - 09:35	Photo taking with speakers	
09:35 - 10:20	Competency of Auditor - International Standard and System	Dr Gilbert Gong Global Personnel Certification Body and IPC Board of Director
10:20 - 11:05	Development of Certification - Sharing of Taiwan Experience	Dr Easter Huang Chinese National Standard Certification Association (中華國際標準認證驗證協會)
11:05 - 11:25	Tea Break	
11:25 - 12:10	Automation in Food Supply Chain	Dr Kit Yuen N.Law & Associates
12:10 - 12:30	Discussion and Q & A	
12:30 - 14:00	Lunch	
14:00 - 14:05	Photo taking with speakers	
14:05 - 14:50	Bring the Connected Enterprise to Life: "Automation & IIoT towards Smart Operations"	Mr Jeremy Tam Senior Account Manager, Rockwell Automation Limited
14:50 - 15:35	Design Risk Management in Semiconductor Assembly Automation	Dr Joseph Choy R&D Director ASM Pacific Technology
15:35 - 15:55	Tea Break	
15:55 - 16:40	System, Competence and Risk Management	Ir Dr Tommy Lo President of Hong Kong Institution of Certified Auditors (Hong Kong)
16:40 - 17:00	Discussion and Q & A	

Dr Gilbert Gong

Global Personnel Certification Body and IPC Board of Director

Competency of Auditor - International Standard and System

Competency of Auditor International Standard and System

Dr. Gilbert Gong
Global Personnel Certification

- Why clients expect to be audited by competent auditors?

- Benefits of Auditing from competent audit team

Organizational effectiveness:

- Information for management decisions
- Potential risks identified
- Assessment of resource capabilities (manpower and equipment)
- Identification of cost reduction opportunities
- Maintenance of customer goodwill

Business performance

- Cost control
- Opportunity identification
- Risk management
- Continual improvement

- Benefits of Auditing from competent audit team

Improvement in system effectiveness:

- Discovery of potential efficiencies in interrelated processes

Improvement in process effectiveness:

- Through examination of interactions with other processes and resources and control utilized

Improvement in performance measurement:

- Provision of timely information to top management
- Facilitation of changes that lead to great effectiveness

Establishing of trusting relationships internally and externally

- Management System Auditing

ISO 19011:2011 defines an audit as a systematic, independent and documented process for obtaining audit evidence and evaluating it objectively to determine the extent to which the audit criteria are fulfilled

Audit are independent, unbiased, fact-finding exercises that provide information for decision making

- Principles of Auditing

- Integrity: the foundation of professionalism
- Fair presentation: the obligation to report truthfully and accurately
- Due professional care: the application of diligence and judgement in auditing
- Confidentiality: security of information
- Independence: the basis for the impartiality of the audit and objectivity of the audit conclusions
- Evidence-based approach: the rational method for reaching reliable and reproducible audit conclusions in a systematic audit process

• Audit

- Audits determine if requirements are being met and if there are opportunities for improvement
- Audits are a prime risk assessment tool
- Audits are indispensable in maintenance and continual improvement of management systems

• Competence in Auditing

- Auditing requires competence (knowledge and skills)
- Certification of auditors is based on relevant training and experience- To be effective, auditors must engage in continual improvement through study and practice

• Competence and Qualification

Conformity assessment –
General requirements for bodies operating certification of persons (ISO/IEC 17024:2012)

- 3.6 competence
ability to apply knowledge and skills to achieve intended results
- 3.7 qualification
demonstrated education, training and work experience, where applicable
- 3.8 assessment
process that evaluates a person's fulfilment of the requirements of the certification scheme

• Competence and Qualification

3.8 assessment

A: Competence based certification:

- the applicant's knowledge, skills, personal attributes and qualifications specific to the program are examined
- emphasize the results of training by assessing competence through valid, reliable and independent examination

B: Qualification based certification:

- relies on an applicant's education and qualifications, rather than on measurable competence
- emphasize training

Terms and definition

- Certification process: Activities by which a certification body determines that a person fulfils certification requirements, including application, assessment, decision on certification, recertification and use of certificates and logos/marks
- Certification scheme: Competence and other requirements related to specific occupational or skilled categories of persons
- Certification requirements: Set of specified requirements, including requirements of the scheme to be fulfilled in order to establish or maintain certification
- Assessment: Process that evaluates a person's fulfilment of the requirements of the certification scheme
- Examination: Mechanism that is part of the assessment which measures a candidate's competence by one or more means, such as written, oral, practical and observational, as defined in the certification scheme
- Fairness: Equal opportunity for success provided to each candidate in the certification process.
- Validity: Evidence that the assessment measures what it is intended to measure, as defined by the certification scheme
- Reliability: Indicator of the extent to which examination scores are consistent across different examination times and locations, different examination forms and different examination teams.

Competence and evaluation of auditors

7.1 General (7 Competence and evaluation of auditors (ISO 19011:2011))

- Confidence in the audit process and the ability to achieve its objectives depends on the competence of those individuals who are involved in planning and conducting audits
- Competence should be evaluated through a process that considers personal behaviour and the ability to apply the knowledge and skills gained through education, work experience, auditor training and audit experience.
- Some of the knowledge and skills described in 7.2.3 are common to auditors of any management system discipline; others are specific to individual management system disciplines
- The evaluation of auditor competence should be planned, implemented and documented in accordance with the audit programme, including its procedures to provide an outcome that is objective, consistent, fair and reliable.

ISO 9001:2015 Challenges and Opportunities for Auditors Control, Automation, Logistic and Risk Management

Competence and evaluation of auditors

The evaluation process should include four main steps, as follows:

- determine the competence of audit personnel to fulfil the needs of the audit programme;
- establish the evaluation criteria;
- select the appropriate evaluation method;
- conduct the evaluation.

ISO 19011:2011 (Guidelines for auditing management Systems) has not provided example of levels of education, work experience, auditor training and audit experience unlike provided in ISO 19011:2002.

Concept of Competence: ISO 19011:2002

- ISO/IEC 17024:2012
- ISO/IEC 17021-1:2015
- ISO/IEC 17021-2:2012
- ISO/IEC 17021-3:2013
- ISO 17000:2004
- ISO 19011:2011
- ISO 29990:2010

ISO 19011:2002 Audit Experience

Table 1 — Example of levels of education, work experience, auditor training and audit experience for auditors conducting certification or similar audits

Parameter	Auditor	Auditor in both disciplines	Audit team leader
Education	Secondary education (see Note 1)	Same as for auditor	Same as for auditor
Total work experience	5 years (see Note 2)	Same as for auditor	Same as for auditor
Work experience in quality or environmental management field	At least 2 years of the total 5 years	2 years in the second discipline (see Note 3)	Same as for auditor
Auditor training	40 h of audit training	24 h of training in the second discipline (see Note 4)	Same as for auditor
Audit experience	Four complete audits for a total of at least 20 days of audit experience as an auditor-in-training under the direction and guidance of an auditor competent as an audit team leader (see Note 5). The audits should be completed within the last two consecutive years.	Three complete audits for a total of at least 15 days of audit experience as an auditor-in-training under the direction and guidance of an auditor competent as an audit team leader in the second discipline (see Note 5). The audits should be completed within the last two consecutive years.	Three complete audits for a total of at least 15 days of audit experience acting as the leader of an audit team under the direction and guidance of an auditor competent as an audit team leader (see Note 5). The audits should be completed within the last two consecutive years.

NOTE 1: Secondary education is that part of the national educational system that comes after the primary or elementary stage, but that is completed prior to entrance to a university or similar educational institution.

NOTE 2: The number of years of work experience may be reduced by 1 year if the person has completed appropriate post-secondary education.

NOTE 3: The work experience in the second discipline may be concurrent with the work experience in the first discipline.

NOTE 4: The training in the second discipline is to acquire knowledge of the relevant standards, laws, regulations, principles, methods and techniques.

NOTE 5: A complete audit is an audit covering all of the steps described in 6.3 to 6.6. The overall audit experience should cover the entire management system standards.

Endorsement of IPC scheme by IAF

IAF MLA Main scopes:

Europe
Body: European co-operation for Accreditation (EA)
Management system certification - ISO/IEC 17021-1
Product certification - ISO/IEC 17065 - 09 Oct 2004
Certifications of persons - ISO/IEC 17024 - 20 Oct 2016

International Accreditation Forum, Inc.

IAF and IPC MLA Agreement

1. Introduction

1.1. The International Accreditation Forum (IAF) and the International Personnel Certification Association (IPC) have entered into a Mutual Recognition Agreement (MLA) to recognize each other's certification bodies (CBs) for the purpose of mutual recognition of their certification decisions.

1.2. The purpose of this agreement is to establish a framework for mutual recognition of certification decisions between the IAF and the IPC.

1.3. The IAF and the IPC agree to recognize each other's certification bodies (CBs) for the purpose of mutual recognition of their certification decisions.

1.4. The IAF and the IPC agree to recognize each other's certification bodies (CBs) for the purpose of mutual recognition of their certification decisions.

1.5. The IAF and the IPC agree to recognize each other's certification bodies (CBs) for the purpose of mutual recognition of their certification decisions.

1.6. The IAF and the IPC agree to recognize each other's certification bodies (CBs) for the purpose of mutual recognition of their certification decisions.

1.7. The IAF and the IPC agree to recognize each other's certification bodies (CBs) for the purpose of mutual recognition of their certification decisions.

1.8. The IAF and the IPC agree to recognize each other's certification bodies (CBs) for the purpose of mutual recognition of their certification decisions.

1.9. The IAF and the IPC agree to recognize each other's certification bodies (CBs) for the purpose of mutual recognition of their certification decisions.

1.10. The IAF and the IPC agree to recognize each other's certification bodies (CBs) for the purpose of mutual recognition of their certification decisions.

GPC GLOBAL PERSONNEL CERTIFICATION

Auditor qualification of FSSC 22000:
The process applied to confirm auditor competence.

HKICA

FOOD SAFETY SYSTEM CERTIFICATION 22000
Part IV: Requirements for Certification Bodies

FSSC 22000

Annex V – Auditor Competence

1 Purpose

This document states the requirements for certification bodies (CBs) with respect to the auditor competence and qualification process.

2 Scope

These requirements apply to all auditors conducting FSSC 22000 or FSSC 22000 Quality audits – from initial training, through qualification, to requalification and also covers extensions to sector and/or category(ies) and build on the requirements of ISO/IEC 17021-1:2015, ISO/TS 22003:2013 and GFSI BRv7:2017 in this area.

GPC GLOBAL PERSONNEL CERTIFICATION

Auditor qualification of FSSC 22000:
The process applied to confirm auditor competence.

HKICA

FOOD SAFETY SYSTEM CERTIFICATION 22000
Part IV: Requirements for Certification Bodies

FSSC 22000

3 Qualification

There are four steps in the qualification process:

- 1) selection of the trainee auditor;
- 2) initial training;
- 3) witnessed assessment and
- 4) registration.

3.2 Initial training and experience

The CB shall ensure that trainee auditors are meeting the following initial training and experience requirements:

- 1) Lead Auditor Course for FSMS or QMS – minimum 40 hours including exam;
- 2) HACCP training – minimum 16 hours including exam;
- 3) ISO 22000 Standard – minimum 8 hours including exam (if not included as part of Lead Auditor Training Course);

GPC GLOBAL PERSONNEL CERTIFICATION

Auditor qualification of FSSC 22000:
The process applied to confirm auditor competence.

HKICA

FOOD SAFETY SYSTEM CERTIFICATION 22000
Part IV: Requirements for Certification Bodies

FSSC 22000

3.2 Initial training and experience

- 4) Food defense training covering food defense risk assessment methodology and possible mitigation measures (including exam);
- 5) Food fraud training covering food fraud vulnerability assessment methodology and possible mitigation measures (including exam);
- 6) All relevant Scheme requirements (including exam); ISO/TS 22003 (Annex C), ISO 19011 and ISO/IEC 17021-1 (as applicable to the auditing processes of the CB including exam);
- 7) Experience in the food or associated industry including at least 2 years full time work in quality assurance or food safety functions in food production or manufacturing, retailing, inspection or enforcement or the equivalent and
- 8) At least ten 10 audit days and five ISO 22000 or GFSI recognized scheme audits relevant to the specific industry sector including at least one FSSC 22000 audit.

ISO 9001:2015 Challenges and Opportunities for Auditors Control, Automation, Logistic and Risk Management

**Auditor qualification of FSSC 22000:**
The process applied to confirm auditor competence.

3.3 Assessment

1) The CB shall:

- a) provide supervised training in food safety audits;
- b) conduct a FSSC 22000 witnessed audit of the auditor to confirm competence is attained and
- c) document the sign-off of the satisfactory completion of the training program and witnessed audit.

2) The supervised training and the witnessed audit shall be conducted by a FSSC 22000 qualified auditor or an FSSC 22000 technical certification person of equivalent competence and experience using the GFSI witnessed audit tool (when available).

**IAF MD 9:2017: Application of ISO/IEC 17021-1 in the Field of ISO 13485**

7.1 Competence of personnel

Where ISO/IEC 17021-1 Clause 7.1.1 refers to (as relevant for the specific certification scheme) ISO 13485, this should be understood to mean medical devices and applicable legal requirements. All personnel involved in ISO 13485 certification shall meet the competency requirements of Annex B.

7.2 Personnel involved in the certification activities

Each auditor shall have demonstrated competence as defined in Annex C.

MD 7.2.4 Auditor experience

For a first authorization, the auditor shall comply with the following criteria, which shall be demonstrated in audits under guidance and supervision:

- a) Have gained experience in the entire process of auditing medical device quality management systems, including review of documentation and risk management of applicable medical devices, parts or services (see Table A.1.7), implementation audit and audit reporting. This experience shall have been gained by participation as a trainee in a minimum of four audits for a total of at least 20 days in an accredited QMS program, 50% of which shall be against ISO 13485 preferably in an accredited program, and the rest in any other accredited QMS program.

**Table of knowledge and skills**

Knowledge and skills	Personnel conducting the application review to determine audit type	Personnel reviewing audit results and making certification decisions	Auditor	Personnel managing program
Knowledge of generic quality management system practices	X	X	X	X
Knowledge of legal framework of regulations and role of the CB	X	X	X	X
Knowledge of medical device risk management, e.g. ISO 14971	X	X	X	X
Knowledge of intended use of medical devices			X*	
Knowledge of risks associated with the medical device			X*	
Knowledge of relevant product standards in the assessment of medical devices			X*	
Knowledge of IAF's ISO 17021 processes	X	X	X	X
Knowledge of Medical Device Business Technology	X	X	X*	X

*This knowledge or the skills marked with * could be provided by a technical expert.

**Application of ISO/IEC 17021-1 in the Field of Medical Device Quality Management Systems (ISO 13485)**

Parts or services	Raw materials	Raw materials, plastic, wood, ceramic
Components	Electrical components, fasteners, shaped raw materials, machined raw materials and molded plastic	
Subassemblies	Electronic subassemblies, mechanical subassemblies, made to drawings and/or work instructions	
Calibration services*	Verification/confirmation services for measuring instruments, tools or test fixtures	
Distribution services	Distributors providing storage and delivery of medical devices, not acting as a 'legal manufacturer' for medical devices	
Maintenance services	Electrical or mechanical repair services, facility cleaning and maintenance services, uniform cleaning and testing of ESD smocks	
Transportation services	Trucking, shipping, air transportation service in general	
Other services	Consulting services related to medical devices, packaging services, etc.	

*Organizations providing calibration services should be accredited to ISO/IEC 17025

**IAF MD 10:2013**

IAF Mandatory Document for Assessment of Certification Body Management of Competence in Accordance with ISO/IEC 17021:2011

6.3 Certification in a personnel certification scheme, accredited to ISO/IEC 17024 may be used as demonstrating the competence of personnel, to the extent covered by the scope of the scheme. The AB shall seek evidence that the CB has determined which of its competence criteria are not covered by the scope of the personnel certification scheme and that the CB has performed its own evaluation against these criteria.

6.4 Where a personnel certification scheme is not accredited it may be used only as an indication that personnel have certain knowledge and skills, and the AB shall verify that the CB has performed its own evaluation of competence against the criteria covered by the scheme.

**History of IPC**

IPC was established as a non-for profit organization, in 1995, by the name of "International Auditor and Training Certification Association (IATCA)". To adapt to market needs for certification of professionals in a variety of categories, the role and name was changed during the Chicago Annual General Meeting (2003) to "International Personnel Certification Association (IPC)". IPC's main activity is to develop certification schemes for professionals. Although the focus of IPC is personnel certification, recognition of training providers and training courses are also part of IPC's activities. IPC's objective is to promote the interests of our members (personnel certification bodies and other related interest parties) and serve the needs of the society for the competence of professionals. IPC is also a "Scheme owner", which means that IPC develops and owns Certification Schemes (normative documents used for accreditation/certification purposes). These schemes are specifying rules and frames for competence, on which the personnel certification body, member of IPC, may elaborate.

"IPC MANAGEMENT SYSTEM AUDITORS"
IPC-PL-11-006

3.5 Auditing Experience
To be eligible for certification, all auditing experience shall have been gained in the three-year period prior to certification.

3.5.1 Audits for IPC MS Auditor
3.5.1.1
The experience shall comprise the entire audit process from preparation to reporting, in accordance with ISO 19011 or ISO/IEC 17021. This is referred to as a complete audit.
3.5.1.2 The applicant for certification shall have acted as a member of an audit team, team leader or as sole auditor on at least 4 complete audits, the total duration of which shall be a minimum of 20 days including preparation and reporting with a minimum of not less than 8 days on site.

The audits in which the applicant was team leader shall cover the entire audit process from preparation to reporting in accordance with ISO 19011 or the ISO/IEC 17021 family.

First party (internal audits), second party (audit of a supplier) and third party (audit by an independent organization) are acceptable audits.

PREREQUISITES OF IPC MS Auditor

3.1 Education

- Applicants should have completed at least secondary education (typically all the years full-time schooling prior to university entrance).
- Alternative, applicants may be considered for certification (10 years full time work experience and satisfy the PCB that they have achieved a satisfactory level of knowledge for Management Systems auditing.

3.2 Work Experience

- Applicants for all grades with post-secondary education degree shall have at least 4 years full-time (or part time work that totals 4 years) work experience in a technical, professional or management position of accountability involving the exercise of judgement. This period shall be increased to 5 years for applicants with secondary education.
- Applicants shall provide documentary evidence of work experience; this evidence may be presented in the form of employer references giving information on work actually carried out and positions held.
- As an alternative to the documentation requirement in 3.2.2, the applicants can provide a signed self-declaration, giving information on work actually carried out and positions held.

PREREQUISITES OF IPC MS Auditor

3.3 Management System Work Experience

- Applicants shall have a minimum of 2 years relevant experience in the implementation, operation, and/or auditing of management systems, which provides the practical knowledge necessary to audit.

3.4 Training
Applicants shall have completed MS auditor training. The training shall cover the competence required for MS auditors in this scheme. A minimum of forty (40) hours training is required.
Training can be performed by in-class courses, e-learning or other suitable learning methods.
See also IPC-SC-11-002 "IPC Specification on recognition of training courses and training providers".

3.5 Auditing Experience
All auditing experience shall have been gained in the three-year period prior to certification.

PREREQUISITES OF IPC MS Auditor

3.5.1 Audits for IPC MS Auditor

- The totality of auditing experience for auditor grade certification shall be based on requirements of an applicable management system standard as described in annex to this document. The experience shall comprise the entire audit process from preparation to reporting, according to ISO 19011 or ISO/IEC 17021. This is referred to as a complete audit.
- Show as a member of an audit team, team leader or as sole auditor on at least 4 complete audits, the total number shall be a minimum of 20 days with a minimum of not less than 8 days on site.

3.5.2 Audits for IPC MS Lead Auditor

- Lead Auditor grade shall satisfy all auditing and competence evaluation requirements for IPC MS Auditor, and shall have performed as a team leader in at least 3 of the audits required, as described in 3.5.1.2.

The audits in which the applicant was team leader shall cover the entire audit process from preparation to reporting in accordance with ISO 19011 or the ISO/IEC 17021 family. First party (internal audits), second party (audit of a supplier) and third party (audit by an independent organization) are acceptable audits.

PREREQUISITES OF IPC MS Auditor

SECTION 4 COMPETENCE REQUIRED FOR EACH GRADE OF IPC MANAGEMENT SYSTEMS AUDITORS

4.1 Personal behaviour

- a) 4.1.1. Applicants for certification shall be able to demonstrate the personal behaviour necessary for the effective and efficient performance of the audit as defined in clause 7.2.2 of ISO 19011:2011 and Annex D of ISO 17021:2011.

4.2 Competence

- a) 4.2.1 Knowledge and skills for all Management Systems Auditor grade certification:
 - a) Detailed knowledge of ISO 19011
 - b) Competence required to fulfil the needs for generic knowledge and skills for management system auditors according to ISO 19011:2011 item 7.2.3.2
 - c) How to conduct interviews
 - d) How to collect and verify information
 - e) How to determine audit findings

PREREQUISITES OF IPC MS Auditor

- f) How to prepare audit conclusions
- g) Types of audits: management system audits, process and product audits;
- h) Principles, procedures and techniques of auditing;
- i) How to relate the auditee management system to the audit criteria;
- j) How to conduct an effective audit in the context of the auditee's organisational situation;
- k) How to evaluate a process approach and process performance;
- l) Regulations, and other specific considerations that are relevant to the management system to be audited;
- m) Personal behaviour necessary for the effective and efficient conduct of a management system audit;
- n) Statistical methods: sampling techniques, basic statistical methods (bar-charts, pie-charts, line-charts and trend-charts);
- o) Audit related risks;
- p) How to communicate effectively with the auditee and audit client;
- q) How to evaluate the procedures common to the other management systems;
- r) How to interpret an integrated management system;

ISO 9001:2015 Challenges and Opportunities for Auditors Control, Automation, Logistic and Risk Management

PREREQUISITES OF IPC MS Auditor

- 4.2.2 Knowledge and skills for all Management Systems Lead Auditor grade certification:
- a) All the skills and knowledge listed above for the Management Auditor and
- b) Competence required to fulfil the needs of the audit programme according to ISO 19011:2011 item 7.2.1
- c) Competence required to fulfil the needs to generic knowledge and skills of an audit team leader according to ISO 19011:2011 item 7.2.3.4
- d) How to communicate with senior management;
- e) How to establish, plan and execute the activities of an audit team;
- f) How to organize and direct audit team members;
- g) Conduct the opening and closing meeting
- h) Represent the audit team with audit client and auditee
- i) Provide direction and guidance to team members
- j) Lead the audit team to reach audit conclusions
- k) Prevent and resolve conflicts

PREREQUISITES OF IPC MS Auditor

- l) How to read and evaluate an organization map (organogram);
- m) How to determine appropriate business improvement tools;
- n) How to evaluate the management system effectiveness;
- o) How to prepare and complete the audit report.
- p) How to interpret the financial statements.

7.2.2 Personal behavior in ISO 19011:2011

Auditors should possess the necessary qualities to enable them to act in accordance with the principles of auditing as described in Clause 4. Auditors should exhibit professional behaviour during the performance of audit activities, including being:

- ethical, i.e. fair, truthful, sincere, honest and discreet;
- open-minded, i.e. willing to consider alternative ideas or points of view;
- diplomatic, i.e. tactful in dealing with people;

PREREQUISITES OF IPC MS Auditor

- — observant, i.e. actively observing physical surroundings and activities;
- — perceptive, i.e. aware of and able to understand situations;
- — versatile, i.e. able to readily adapt to different situations;
- — tenacious, i.e. persistent and focused on achieving objectives;
- — decisive, i.e. able to reach timely conclusions based on logical reasoning and analysis;
- — self-reliant, i.e. able to act and function independently whilst interacting effectively with others;
- — acting with fortitude, i.e. able to act responsibly and ethically, even though these actions may not always be popular and may sometimes result in disagreement or confrontation;
- — open to improvement, i.e. willing to learn from situations, and striving for better audit results;
- — culturally sensitive, i.e. observant and respectful to the culture of the auditee;
- — collaborative, i.e. effectively interacting with others, including audit team members and the auditee's personnel.

7.4 Selecting the appropriate auditor evaluation method (ISO 19011:2011)

Table 2 — Possible evaluation methods

Evaluation method	Objectives	Examples
Review of records	To verify the background of the auditor	Analysis of records of education, training, employment, professional credentials and audit experience
Feedback	To provide information about how the performance of the auditor is perceived	Surveys, questionnaires, personal references, testimonials, complaints, performance evaluation, peer review
Interview	To evaluate personal behaviour and communication skills, to verify information and test knowledge and to acquire additional information	Personal interviews
Observation	To evaluate personal behaviour and the ability to apply knowledge and skills	Role playing, witnessed audits, on-the-job performance
Testing	To evaluate personal behaviour and knowledge and skills and their application	Oral and written exams, psychometric testing
Post-audit review	To provide information on the auditor performance during the audit activities, identify strengths and weaknesses	Review of the audit report, interviews with the audit team leader, the audit team and, if appropriate, feedback from the auditee

Auditing Management System - General

Competency	Examination methods
Knowledge: <ul style="list-style-type: none">• Reference standard:• ISO 19011	1. Written exam
Skills: <ul style="list-style-type: none">• Audit preparation;• Audit (on-site);• Audit reporting;• Audit follow-up. All these skills require demonstration of: <ul style="list-style-type: none">• Understanding documentation;• Sampling techniques;• Context (religion, culture, social)	1. Live audit 2. Simulated audit 3. Practical activities 4. Written exam
Personal attributes: <ul style="list-style-type: none">• Communication (oral and written)• As per ISO 19011 clause 7.2	1. Live audit 2. Simulated audit 3. Oral exam (interview) 4. Written exam

- ### 中國認證產業分析
- 中國認證及檢驗產業是在1980年以後才正式開始，目前它的前五大，分別是，華測，國檢，電科院，蘇州交通科學院，安車檢測。五大加起來只有全球最大的SGS通標認證有限公司一年60億美金12分之1=5億美金。
 - 中國認證及檢驗產業相對規模都小得很多，營業額也祇有世界最大的百分之一。主要原因是，除了華測CTI,國檢CCIC已經踏出國門，主要是東南亞各國進行檢測，所以有上億美金的營業額。
 - 除了，正式上市的五家，其他還有30家以上的新三板上市公司，營業額有的小到祇有幾百萬的人民幣，甚至於2017年可以負成長超過百分之百。
 - 由以上結論，如果不踏出中國以外，有他自己專業的檢驗認證也可以在國內取得一席之地且利潤甚至於高達一個資本額，例如，電科院，蘇州交通科學院以及安車檢測。

- ### 發展報告
- 相較於這些國外檢測機構的公司，我國華測跟國檢都不超過20年的歷史，其中國檢16000人，他負責在世界各國進口中國產品的檢測，華測重要的是在國內出口的檢測，所以兩個的營業額分別是2.61跟1億美金，雖然差了一倍，但是利潤都是1億人民幣，甚至於國檢大10%(1.1億人民幣)。
 - 首先中國是政策保護，所以全國大型的認證機構都有1億以上的人民幣收入，我們是IAS美國and HKICA-CNAS的認可，如果能夠取得中國的配額，進行海外產品的檢測。主目標是某些領域產品的進口檢測，例如，農產品即食品的部分。同時進行出口產品的檢測與驗證。
 - 由以上結論，踏出中國，有自己專業的檢驗例如CNC電子產品，車輛檢測(KAPA)。

- ## 第二章 文獻探討
- ### 第一節 ISO驗證制度歷史之探討
- ### 第二節 形式績效指標與實質績效指標兩種假設之探討
- ### 第三節 ISO驗證制度與利潤、風險值及質量成本之探討
- ### 第四節 ISO驗證的相關實證之探討

ISO 9001:2015 Challenges and Opportunities for Auditors Control, Automation, Logistic and Risk Management

2. LITERATURE

- ISO驗證制度是工業發展的火車頭 (Fiorenzo Franceschini, 2010)
- 驗證制度的目標是推動與落實國際標準 (Charles J. Corbett, 2001)
- ISO的適用價值和領域也受到質疑 (Charles J. Corbett, 2001)
- 意大利不同的工商產業類別的ISO9001和ISO14000驗證證書張數對國內生產總值GDP的貢獻 (FF 2008)
- 馬來西亞的研究顯示ISO9001與GDP有關 (Matthew Potoski, 2013)
- 中國ISO14001卻與GDP無線性關係 (A Prakash, 2006)
- 缺乏對各國整體ISO驗證張數與GDP之研究 (Easter Huang, 2013)
- G. Cornelis van Kooten 於2012年建議加拿大政府管理森林驗證以推廣經濟；
- 在墨西哥企業獲得第三方ISO驗證可以減少腐敗 (Ivan Montiel, 2012)

19

2. LITERATURE

- 驗證基本功能包含：一是發揮作為企業內部管理工具，二是作為對利益相關者推廣該標準績效的證明。(G.Y.Qi., 2011)
- A. Prakash於2006年提出如果世界主要國家的出口市場都要求自願的ISO驗證證書，對通過驗證的企業貿易量是有關係
- 驗證師檢查船體的情況是否適合海戰或遠航 (Allender, H.D., 1992)
- LR/ABS/CCS/KR/BV/DNV/
- 專業領域的驗證 (黃乃蓮 2004) TUV/BSMI/SGS/NQA/
- 認證機構 (Accreditation Board, 以下簡稱AB) UKAS/ANAB/CNAB (Hesan A. Quazi, 2004)
- IAF國際認證論壇多邊相互承認協議 (Barry L.M. Mak, 2011)
- S.X. Zeng, 於2005年指出，中國在2002年5月20日成立了該國與全球唯一的認證監管機構「中國國家認證認可監督管理委員會CCAA
- 在使驗證申請者和消費者能夠對驗證機構所提供的檢驗報告及驗證證書建立信心」

20

第三節 名詞詮釋

1. 國際標準化組織 (International Organization of Standard, ISO) : 184個國家或區域。
2. ISO國際標準編碼原則: ISO 9001:2008
3. 驗證: 依據ISO 9000:2005與我國〈標準法〉第三條: 由中立之第三方出具而證明特定產品、過程或服務能符合規定要求之程序。
4. 認證: 標準法第三條亦定義認證乃指「主管機關對特定人或特定機關(構)給予正式認可，證明其有能力執行特定工作之程序」。
5. 稽核: 系統的、獨立的及文件化的過程以獲取稽核佐證，並客觀地評估之，以決定符合 的界限

21

第三章 結論與建議

壹、國家ISO驗證本質假設結論

本研究研究結果證實，國家ISO驗證本質『形式績效指標』假設成立
H1假設為全球2012年GDP排名前45國7種ISO驗證證書張數對5種GDP至少有一個顯著影響，研究結果顯示：
H1a成立：2012年各國7種ISO驗證對2012年GDP有正向影響
H1b成立：2012年各國7種ISO驗證對2013年GDP有正向影響
H1cde不成立：2012年各國7種ISO驗證對2012年GDP成長率/2012年及/2013年人均GDP/無影響

22

貳、個別企業ISO驗證本質假設結論

- 一、我國202個別企業2012年ISO驗證本質『形式績效指標』假設結論
- H2a成立：2012年企業7種ISO驗證對2012年利潤有影響
- H2b成立：2012年企業7種ISO驗證對2012年營業額有影響
- H2c成立：年企業7種ISO驗證對2012年風險有影響
- H2d成立2012年企業7種ISO驗證對2012年質量成本有影響

本研究發現，個別企業ISO驗證本質『形式績效指標』假設，在樣本母數大於200(我國ISO驗證2%)時成立；

24

控制變項於我國汽車產業限制時不論企業規模大小，企業選擇7種ISO驗證制度對同年利潤、風險及質量成本無差異。

本研究發現，汽車產業ISO驗證本質『形式績效指標』假設不成立；

迴歸方程式(2)
 $2012\text{年GDP} = 139465.1 + 10.52822X_1 - 8371.36X_2 + 383.1194X_3 + 2787.498X_4$ 迴歸方程式(4)
 $2013\text{GDP} = 134023.1 + 12.36946X_1 - 8734.23X_2 + 376.0369X_3 + 2849.97X_4$

一、我國汽車產業2012年ISO驗證本質『實質績效指標』

1. 控制變項於我國汽車產業限制時，整體企業與企業規模大於1億企業選擇6種績效指標對同年利潤有差異，可解釋企業51.61%與46%利潤，同理增加到13種績效指標時，可解釋企業62.3%與55.86%利潤，但企業規模小於1億企業選擇13種績效指標對同年利潤無差異。
2. 整體產業企業與企業規模大於1億企業選擇6種績效指標對同年風險值有差異，可解釋企業31.26%與41.56%風險值同理增加到13種績效指標時，可解釋企業34.99%與43.36%風險值，但企業規模小於1億企業選擇13種績效指標對同年風險值無差異。
3. 企業選擇6種績效指標對同年質量成本有差異，整體汽車產業、企業規模大於及小於1億企業各可解釋42.67%、28.09%與46.18%質量成本。同理增加到13種績效指標時，各可解釋48%、35.54%與53.17%質量成本。

研究建議

本研究的首要意義在提出『形式績效指標』與『實質績效指標』兩種假設與相關研究模式，來探討國家與我國產業驗證策略，進而兼論驗證工作的本質。依據研究發現提出以下建議：

國家驗證策略：

1. 本研究模式是建立在控制變項「全球GDP排名前45國」下，以各國7種ISO驗證數對GDP進行分析，控制變項為已開發、開發中與低開發國家分別瞭解其解釋量變化，以推廣驗證制度與強化該國工業。
2. 控制變項區分成不同工業如重工業，輕工業、基礎工業與服務業的不同國別來研究各國ISO驗證對GDP影響。
3. 本研究結果發現全球GDP前45國ISO驗證證書張數可聯合解釋與預測86.3%&74.48%的該國次年GDP與85.9%、75.21%的該國同年GDP，所有資料為大眾可取得次級資料，信度與再現性極高，各國經濟研究單位可進一步的研究，該國ISO驗證張數是否可預估GDP，或列為預測因子之一。

HK AND TAIWAN AUDITOR FUTURE

Automating the processing line (1) - Quality

- Safe and Efficiency
- converting lower-paying jobs into higher-paying jobs
- more accurate and precise
- eliminating the ergonomic risks with repetitive motion

Copyright © 2018 N. Law & Associates Company Ltd. All rights reserved.

Automating the processing line (2) - OSH

- eliminating the ergonomic risks with repetitive motion
- take over dangerous tasks
- like cutting frozen chicken

Copyright © 2018 N. Law & Associates Company Ltd. All rights reserved.

Automating the processing line (3) – Food Safety

- can be cleaned with chemicals and hosed down with a water jet
- reduce human contact with the food
- cuts down on *Listeria* and *E. coli* outbreaks
- lost production and sales

Copyright © 2018 N. Law & Associates Company Ltd. All rights reserved.

Artificial Intelligence (AI) Automation People

Copyright © 2018 N. Law & Associates Company Ltd. All rights reserved.

Growing better food

- At the farming level, AI used to detect plant diseases and pests, improve soil health, and more.
- using AI to monitor the effects of variables like UV light, salinity, heat, and water stress
- With the data, developing “recipes” for the perfect crops

Copyright © 2018 N. Law & Associates Company Ltd. All rights reserved.

Sorting food

- cameras and near-infrared sensors, to “view food in the same way that consumers do” and sort it based on that perception

Copyright © 2018 N. Law & Associates Company Ltd. All rights reserved.

Ensuring employees follow personal hygiene procedures

- used in restaurants as well as manufacturing facilities
- uses cameras to monitor workers
- employs facial-recognition and object-recognition software
- to determine whether workers are wearing hats and masks as required by food safety law
- If it finds a violation, it extracts the screen images for review

Copyright © 2018 N. Law & Associates Company Ltd. All rights reserved.

Managing the supply chain

- Food safety monitoring and testing product at every step of the supply chain
- More accurate forecasting to manage pricing and inventory
- Tracking products from farm to consumer to provide transparency

Copyright © 2018 N. Law & Associates Company Ltd. All rights reserved.

Cleaning processing equipment

- uses ultrasonic sensing and optical fluorescence imaging
- to measure food residue and microbial debris in a piece of equipment
- and then optimize the cleaning process.

給我一個理由相信
日本Oki奇奇自助收銀機

Uaglo結帳店Oki，已經於今日正式登陸香港。不過如果你認為，香港人對日本，會從此失去所有到Oki結帳理由？你又未必，因為有一種體驗，叫「神奇自助收銀機」，係日本Oki有，而香港Oki未有。

日本Oki早於2015年引入「自助收銀機」，甚為神奇。你唔係要自己，係要香港一般商店用自助收銀機，都係要大家自己掃碼付款，係種奇怪產品。當係你，成日掃碼付款，你唔會知道中間Code。不過Oki結帳機，只要你將一摺紙插入去個「收銀機」輸入面，（你其後插入去，你總會掃結帳文，成住某樣去去都係），然後門埋個機，一按，佢就自動左右自動掃到所有產品，然後你睇住螢幕指示弄錢，睇住走人，閃燈！

其實Oki結帳產品，都唔係用RFID（無線電頻率識別），而係用RFID（無線電頻率識別）技術，英文全名Radio Frequency Identification，意思係利用電波（RF）（無線電式）進行距離識別（ID）或「自動識別技術」。正正係RFID概念也，令大家都

Risk or opportunities?

Robots and automation: How Africa is at risk

© 19 March 2018

f t d e v Share

US companies could move manufacturing operations back home due to falling costs of automation

Within less than two decades it will be cheaper to operate robots in US factories than hire workers in Africa, a new report warns.

Falling automation costs are predicted to cause job losses as manufacturers return to richer economies.

Some analysts say poorer countries could be less impacted by this trend, however the Overseas Development Institute (ODI) suggests otherwise.

But its report adds African nations have time to prepare for this challenge.

<http://www.bbc.com/news/world-africa-43459138>

"If done well, automation can present important opportunities for African countries by improving labour productivity in manufacturing," she said.

It has been suggested that poorer countries will not be as affected by automation because they have less money to invest in it.

"Our research shows that this is overly optimistic. Currently the cost of operating robots in furniture manufacturing is still higher than labour, but this will not be the case within 15 years", Dirk Willem te Velde, director of the Supporting Economic Transformation programme at ODI, said in a statement.

ODI's report, *Digitalisation and the Future of Manufacturing in Africa*, found that in furniture manufacturing, the cost of operating robots and 3D printers in the US will be cheaper than Kenyan wages by 2034.

In Ethiopia, ODI predicts robotic automation will be cheaper than Ethiopian workers between 2038 and 2042.

This gives the continent between one to two decades to build up its capabilities in sectors less at risk of automation, "such as food and beverages, garments, metals", the report writes.

It advises African nations to expand access to broadband and develop local technical skills through vocational training, technology hubs, and a bigger focus on STEM subjects in African educational bodies.

What jobs will disappear because of the ongoing artificial intelligence revolution?

- Transportation. The coming of driverless cars & trucks will require fewer or more specialized drivers.
- Construction & Infrastructure. Ability to better understand the environment will pave the way for more automation of road construction, building robots, and others in the future.
- Logistics & warehousing. There are already robots on the market that can handle these jobs and Amazon has already started using them in its warehouses.
- Manufacturing. Automation has already disrupted this sector and as the degree of automation increases the number of jobs will continue to reduce - machining, assembly, casting, welding, sewing, among others.

Design Risk Management in Semiconductor Assembly Automation

Electronic Packaging Technology

Most of electronic devices operate with silicon chip (IC)

Electronic Packaging & Assembly Workflow

ASM Pacific Technology © 2018

page 6

Precision placement on electronic packages

Multi-layers stack die, demands high accuracy, high speed and reliable bonding performance

Every components become smaller for performance and demands high production rate to lower equipment investment costs. The equipment needs to be extremely reliable.

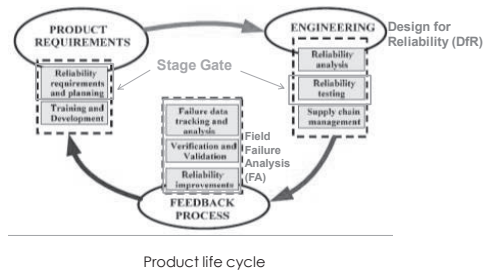

Highest speed SMT pick & place head (Video)

e.g. There are 4 motion travels to pick & place a component, over 1 million cycles per week. Machine design needs to consider both performance and high reliability.

Reliability system for product development

Our development follows IEEE STD 1624 for Organizational Reliability Capability

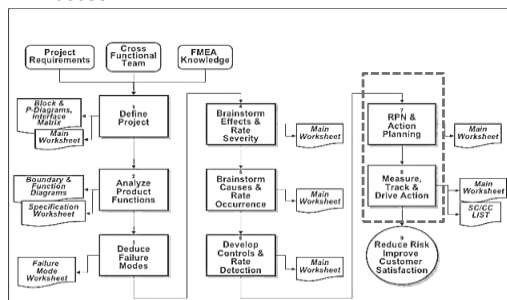

Design Risk and Reliability system

- Some field failure issues are related to design quality
- dFMEA, a tool to understand designer's concept & rationale, risk consideration and follow up actions to lower risk,

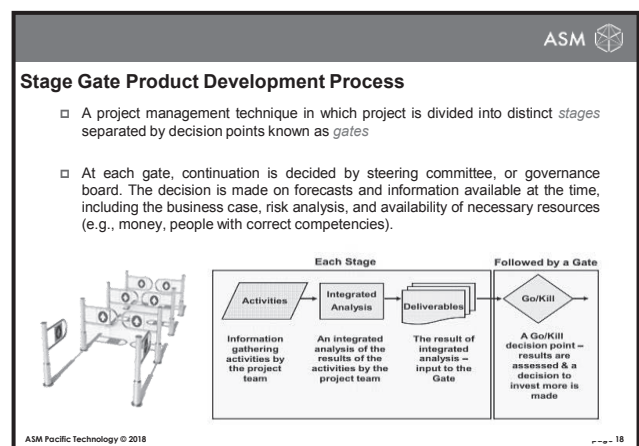

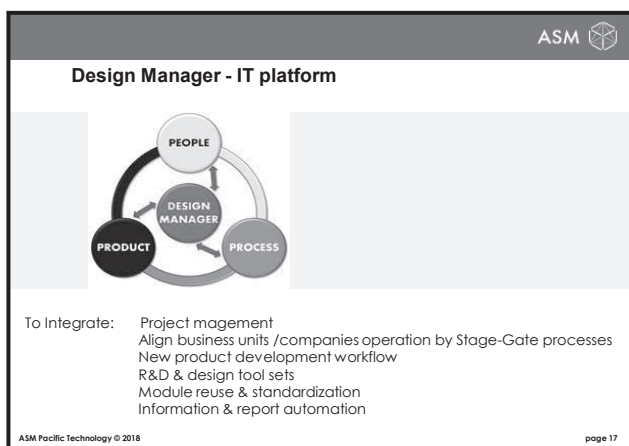

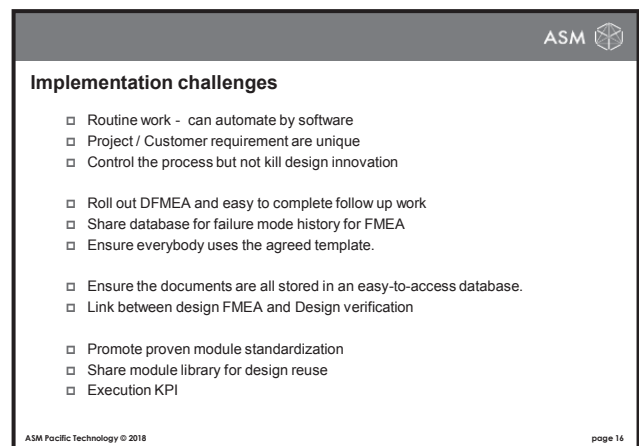

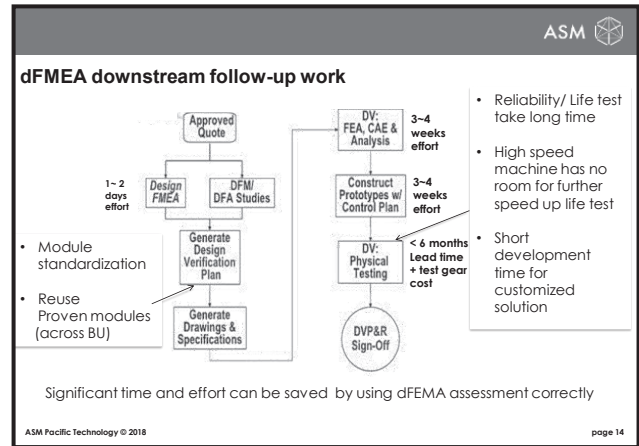

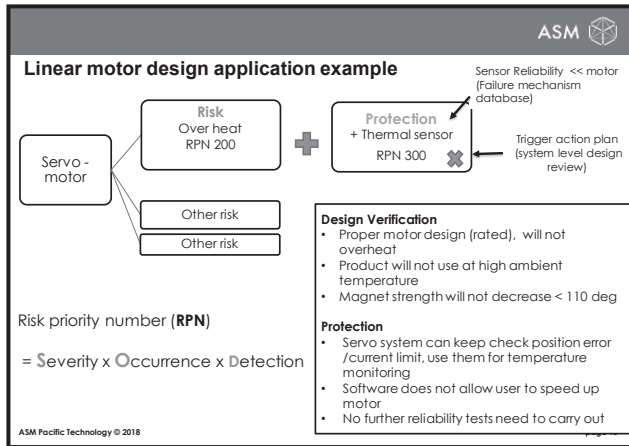

DFMEA Process

The challenge is on execution of risk reduction actions

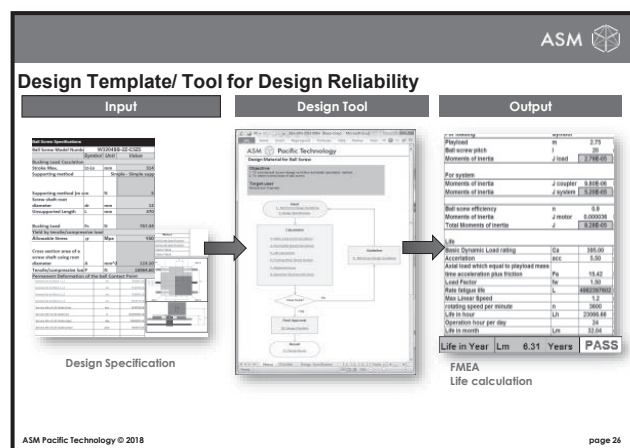

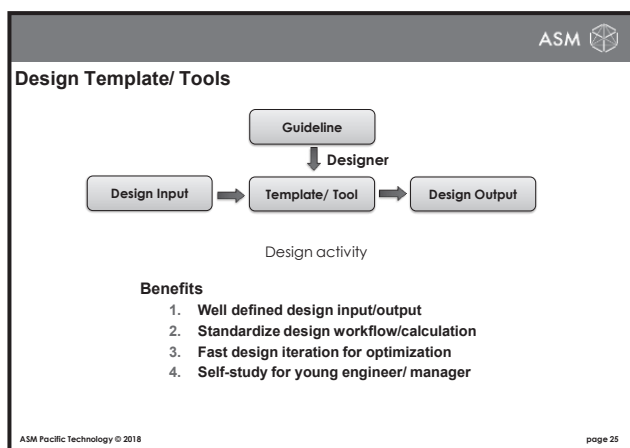

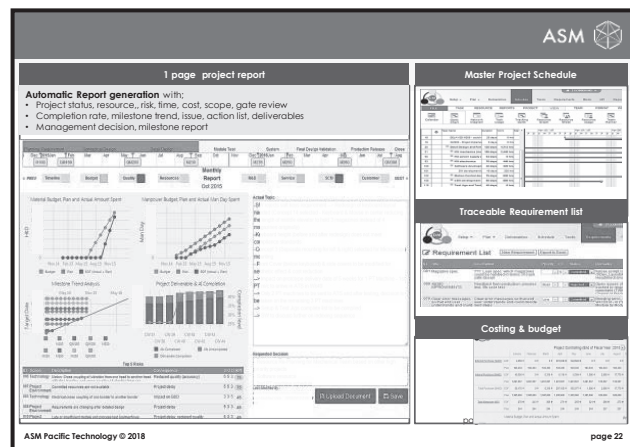

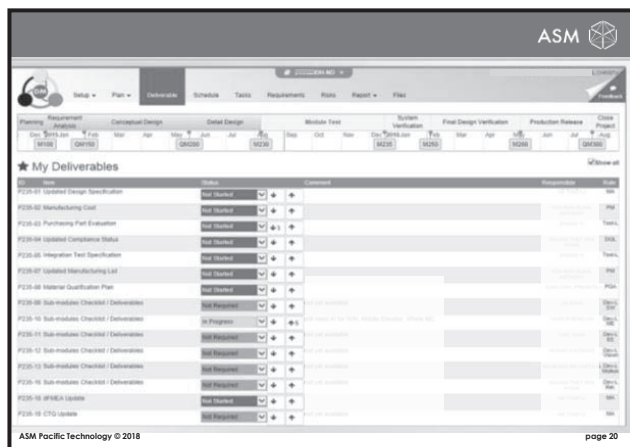

dFMEA table

Stage 1 defining stage for generic list				Stage 2 brainstorming and discussion stage						
Part number	Items	Functions	Stress under Product Life cycle	Potential Failure Mode (total loss function, temporary loss function, degrade...)	Reverse Fault Tree type analysis (RFTA)	Top-down Fault Tree analysis type (TFTA)	Potential Failure Cause and Mechanism from next down stream level	Design Margin	Validation method used and result for corresponding failure mechanism	Design Levels
1. Axis Rotary Actuator	Provide rotary motion to ball screw, and drive the moving table up and down	continuously rotate during overtravel	Coil burn out if continuously rotate during overtravel	1. Totally loss function	Limit actuator driving current, trip the motion base once overload condition exist	8	NA	X 2.5	1. Payload and motion requirement of the moving part (improper actuator selected - overloaded the actuator) 2. Operating current of the actuator (improper driver current limit - burn out the actuator)	5
									1. Burn-in test	1. Follow design rules
										5
										200

ISO 9001:2015 Challenges and Opportunities for Auditors Control, Automation, Logistic and Risk Management

Conclusion

- The challenge to most of the technology organizations is to link between Design FMEA, Design Verification and Improvement Action Plan. Technical / Management review with proper IT system is one of the successful methods.
- dFMEA is a powerful risk measure tool to eliminate technical / design problems at an early development stage, the verification effort and failure cost can be greatly reduced.
- Design risk is application dependent and needs to manage according to its historical problem nature and technical areas.

ASM Pacific Technology © 2018

page 27

Conclusion

- Stage gate management is an effective development mechanism to provide review on deliverables, including risks, with pre-defined criteria.
- Design Manager (IT platform) integrates project management, reporting and technical design tools, that allows risks to escalate to management within development stages for fast decision making and corrective actions.

ISO9001:2015 Risk Based Approach

ISO9001:2015

With the revised standards, there are new requirements for greater leadership involvement in the management system, which must be evident not only in the organization's processes, but in its policies, objectives, and overarching strategic direction.

An effective Quality Management System cannot be achieved without the commitment of the organization's leadership, the revised ISO standard has codified this requirement into seven broad areas.

- Responsibility
- Policy
- Objectives
- Integration
- Compliance
- Operational Awareness, and
- Authorities

WHO leader? Who know ...difference process? Who is more important (responsible) to audit (internal or external?) **Audit**

Maturity models, not just compliance alone

ISO9001:2015 Challenges and Opportunity for Auditors
Control, Automation, Logistic and Risk Management

Hong Kong Institution of Certified Auditors
香港專業審核師學會

ISO9001:2015 Risk Based Approach

Organization had risk management framework

Risk owners would be in different position and activities:

- Risk in construction projects included "Political", "Financial", "Design", "Construction", "Environmental", "Legal/Contractual", "Physical", "Economic", "Technical" and "Operational".

Audit plan for companies' risk has to consider impacts on:

- "Brand/Reputation", "Customers", "Profit", "Product Safety", "People Safety", "Business Continuity", "Product/Service Process", "Cost of Poor Quality" and "Business Strategy".

Audit INVOLVE professional knowledge, such as Engineer (Technical/operational risk based audit)

Board knowledge input required

- Auditor with strong audit experience
- Professionals with audit knowledge

Ref: "Risk Based Auditing – Engineering and Construction" by Richard Green (Head of HKCA Technical Services)

ISO9001:2015 Challenges and Opportunity for Auditors
Control, Automation, Logistic and Risk Management

Hong Kong Institution of Certified Auditors
香港專業審核師學會

ISO9001:2015 Risk Based Approach

Element of success:

Developmental Stages of management System

The Piper Alpha disaster (1988) clearly demonstrated that with the implementation of integrated health, safety and environment management systems, classic safety performance indicators, e.g. fatal accident rate (FAR) had reduced significantly from previous years, BUT none of these indicators reduced to zero.

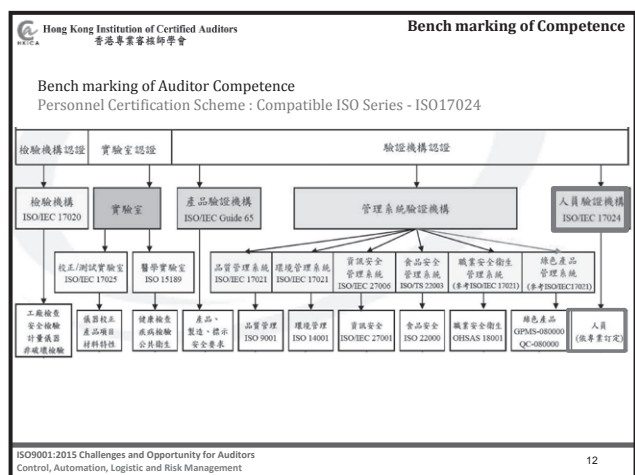

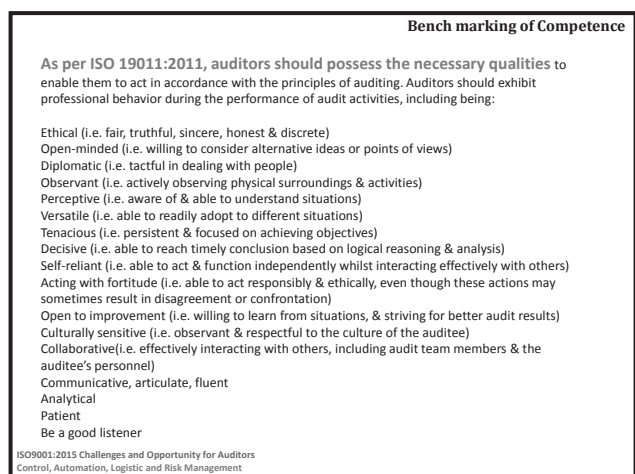

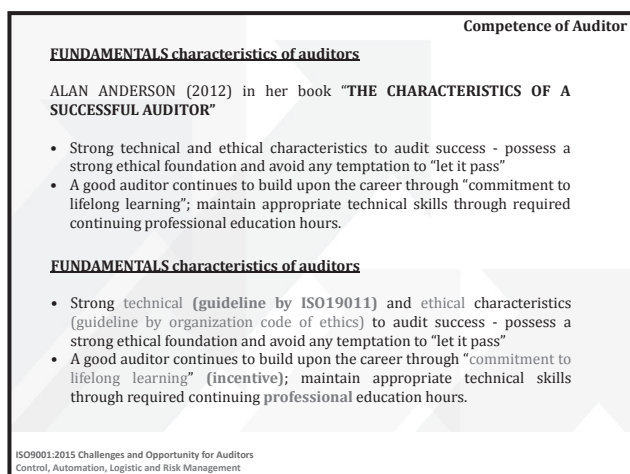

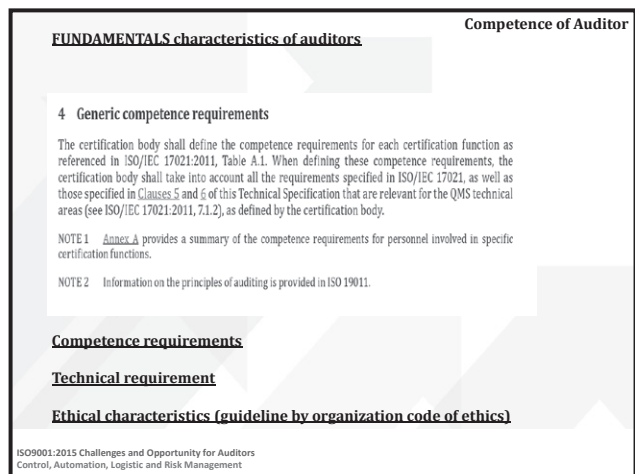

A plateau was about to be reached after the implementation of the mechanical application of (safety) management systems. Hudson (2007) suggested the developmental line of safety management composed of three stages: technology, system and culture.

Quality System Risk

Who involved

What is an audit?

- An audit is conducted in accordance with the specified requirements in order to find out areas of non-conformities for corrections and/or observations for improvements. [ISO9001, 14001, 22000, product certification scheme]

3rd Party Quality Audit

- Third party audit by a government accredited certification body.
- Generic requirements on QMS applicable for any organizations.
- In Hong Kong, all contractors and consultants to be certified to ISO 9001.

Technical Audit

- Verify that the building components constructed in accordance with the approved drawings and specifications
- Approved drawing specify the configuration of the structure, specification define the materials grade and materials standard
- Construction materials audit is a principal and critical part of the technical audit.

ISO9001:2015 Challenges and Opportunity for Auditors
Control, Automation, Logistic and Risk Management

21

Hong Kong Institution of Certified Auditors
香港專業審核師學會

ISO9001:2015 Risk Based Approach

Risk of Internal Audit

All ISO based standards require that internal audits be performed periodically to ensure that the management system complies with requirements of the respective standard. (Internal Auditor contribute to risk and opportunity??)

Risk of System

When internal audits follow the identical process over and over, the internal auditors tend to become bored, those being audited tend to view the ordeal as a waste of time, and **management interest tends to fade away** (non-productive).

In many organizations internal audits deteriorate to an obligation necessary to meet the requirements of the standard rather than a **value adding process**. To keep internal audits fresh, the audit process must be examined.

Who take care?? We need a designated person

ISO9001:2015 Risk Based Approach

How Caterpillar improves quality performance and adherence to its Quality Management System through an internal—but independent—2nd party audit group?

A “siloe” approach through a centrally coordinated team comprised of—or in close collaboration with—internal subject matter experts in various QMS processes.

The team facilitates deployment of a single, comprehensive Quality Management System consisting of best practices observed throughout the enterprise.

The team assesses the effective implementation of the Quality Management System, and through its experience, brings value to the audit program by propagating these best practices as they (include other professionals) are developed.
